RosterFlow

Bus Scheduling & Crew Rostering

The handbook

From an empty timetable to every driver on the road, step by step.
Written for players who have never planned a bus company before.

openOMSI · Omsi-Hub launcher · Bus company mode

CONTENTS

What is in this handbook

1	What RosterFlow is, and the four steps	Read this first
2	Switching it on and finding your way	The screen, top to bottom
3	Step 1 · Timeplan	When do the buses run?
4	Step 2 · Vehicles	Which bus runs which trips?
5	Step 3 · Drivers (duties)	What is one driver's working day?
6	Step 4 · Roster	Who drives what, on which day?
7	OPTIMIZE, issues and preferences	Let RosterFlow help you
8	SAVE, DISCARD and what the game does with it	Nothing counts until you save
9	Your first full planning in 15 minutes	A walkthrough
10	Shortcuts, glossary and problem solving	Keep this page handy

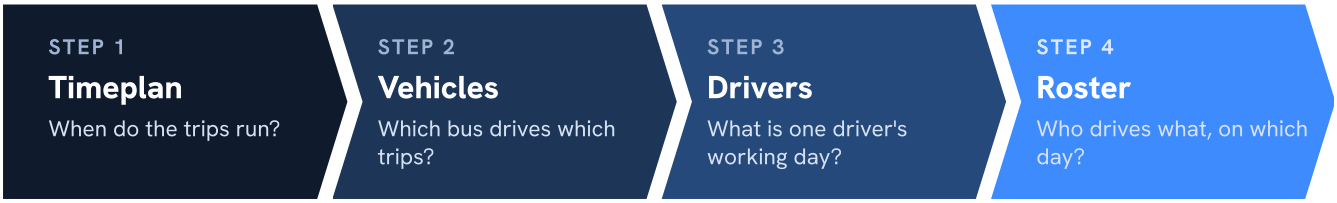

DON'T WANT TO READ?

RosterFlow has a guided tour built in. Open RosterFlow and click the **?** in the title bar: it offers a guided tour, lessons to try yourself and a help sheet. Each lesson waits until you have done the step yourself.

CHAPTER 1

What RosterFlow is, and the four steps

RosterFlow is the planning program of your bus company. It is modelled on the professional software that real transport operators use, so it plans the way they do: in four steps, each building on the one before.

The tabs at the top right of RosterFlow are these four steps, in this order. Work from left to right: a change in an earlier step flows into the later ones.

The four steps in plain words

TAB	WHAT YOU DECIDE	WHY IT MATTERS
Timeplan	The timetable of a line: how long the bus takes between stops, and at what times trips leave. For example, "every 10 minutes from 07:00 to 09:00".	More trips mean more passengers, but also more buses and drivers.
Vehicles	Trips are chained into a **block** (a bus's day): the bus leaves the depot, drives trip after trip and returns at night.	The number of buses on the road at the busiest moment is how many buses you must own.
Drivers	Each bus's day is cut into **duties**: pieces of work one driver can do within the rules (length, breaks, rest).	The number of duties and paid hours decides how many drivers you need, and your wage bill.
Roster	Real drivers are put on the duties, per day: Marieke drives duty 3 on Tuesday.	This is where sickness, holidays and rest times come in.

THE ONE IDEA TO REMEMBER

A **duty** (Drivers tab) is a piece of work without a name, like "duty 3, 18:10–01:51". The **roster** puts a name on it for a day. You design the duties once per timetable, and fill in the names every week.

Easy words for the hard words

Trip

One journey of a bus from one end of the line to the other. Shown as a coloured arrow; the point shows the direction.

Block

One bus's day: all the trips it drives between leaving and returning to the depot. In Dutch: an *omloop*.

Duty

One driver's working day: sign-on, pieces of work on one or more buses, breaks, sign-off.

Relief point

A place where one driver can hand the bus to another: a terminus or the depot.

CHAPTER 2

Switching it on and finding your way

RosterFlow is an add-on for the Normal and Realistic modes. Without it your company uses the standard planning, where the game makes the blocks and duties for you.

1. **Open your company's settings**
   In the bus company, open the settings and find **Add-ons**.

2. **Switch on RosterFlow**
   The switch says it is an advanced tool, modelled on professional software. Switch it on: the logo animation plays and the guided tour is offered.

3. **Open Planning**
   The company's Planning page is now RosterFlow. You can switch the add-on off again at any time; your RosterFlow plan is kept.

The screen, top to bottom

PART	WHAT IT DOES
Title bar	The name of your schedule with a dot (**green** = saved, **orange** = unsaved changes); undo, redo and history; the day switcher (Mon–Fri, Saturday, Sunday); the four tabs on the right.
KPI tiles	The key figures of your planning: buses at the peak (**PVR**), number of duties, paid hours, deadhead (empty) kilometres and costs. After every change, a small green or red number shows the difference. Green is better, red is worse.
Toolbar	SAVE DISCARD Stats, Layers, Filter, Preferences, Print, and OPTIMIZE on the right.
Gantt	The big chart. Time runs from left to right; each row is a bus (Vehicles) or a duty (Drivers). On the left of each row: a checkbox, a red ! when there is an issue, the row's ID, and on hover a lock and a pin.
Status bar	How much is assigned; the counts of **Global**, **Duty** and **Vehicle** issues (click to open the list); the zoom.

MOVING AROUND THE CHART

Ctrl + mouse wheel zooms in and out. Shift + mouse wheel scrolls sideways. The scroll bars at the bottom and right can be dragged too.

EVERYTHING IS A DRAFT

Whatever you change in RosterFlow is a draft until you press **SAVE**. Until then, the game keeps running the plan you saved last. See chapter 8.

CHAPTER 3 · STEP 1

Timeplan: when do the buses run?

The Timeplan is a line's timetable. Pick a line, a day group and a direction, then work on two screens: running times and the timetable.

The bar at the top

Choose the **line**, the **day group** (Mon–Fri, Saturday, Sunday) and the direction: **OUTBOUND** or **INBOUND**. The return trips can have their own times. On the right are the two screens: the clock icon (running times) and the grid icon (timetable). Under the bar is the stop strip: every stop with its code, on a rail in the line's colour.

Screen A · Running times

How many minutes the bus needs between two stops. Because traffic is slower in the rush hour, the day is split into **time bands** (for example 06:00–09:00 peak, 09:00–15:00 off-peak).

1. **Show the running times**
   Click the clock icon on the right of the bar.

2. **Change a running time**
   Click a box with minutes in a time band, type a new number and press Enter. Every trip in that band moves with it at once.

3. **Add or remove a time band**
   ⊕ adds a band, the bin removes one. Click a band's time to type a new one.

Screen B · Timetable

Each row is one trip, with its time at every stop. On the left are fixed columns: PATTERN (which stops it serves), VEHICLE TYPE, START and HEADWAY (minutes since the trip before). On top are figures: the number of trips, trips by pattern and trips by hour.

1. **Show the timetable**
   Click the grid icon on the right of the bar.

2. **Add trips by headway**
   Click the clock tool above the table. Give the first and the last departure and the minutes between buses (for example 10), then click the tick. "10,20" alternates 10 and 20 minutes.

3. **Change a single trip**
   Type a new start or headway: every later trip moves with it. A time you type over a stop turns **orange**, with how far it is off.

4 **Save the timetable**

Click Save. If it asks you to mend something first, two trips leave at the same minute: undo them and add them at other times.

5 **Refresh the blocks**

The line is now marked UNSYNCED in the status bar. Click **Refresh**: the buses' blocks and the duties are made again for the new trips.

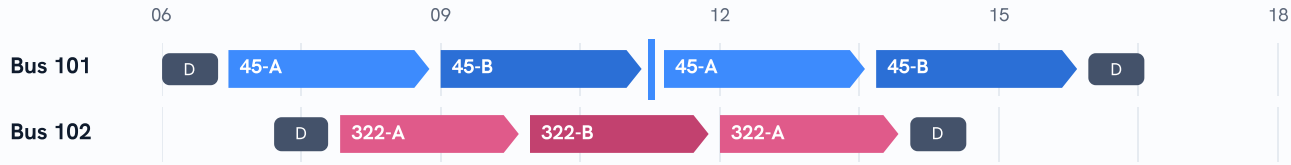

TIP

Start simple: one headway for the whole day. When that works, add extra trips in the rush hours. Watch the KPI tiles in Vehicles: every extra trip at the peak can mean an extra bus.

CHAPTER 4 · STEP 2

Vehicles: which bus runs which trips?

Each row is one bus's day: a block. Your goal is to run all trips with as few buses and as few empty kilometres as possible.

Grey boxes (D) are the depot: the bus pulls out and pulls in. Coloured arrows are trips in the line's colour, labelled line-direction. The blue line on bus 101 is a cut: another driver takes over there.

Move a trip to another bus

1. **Pick up a trip**
   Drag a coloured chip, or double-click it. Slots appear on every bus it could go to.

2. **Read the stars and the cost**
   Hold the mouse over a slot. Five stars is the cheapest choice. A **blue** slot breaks no rule; a **red** one does. The card shows the cost difference.

3. **Drop it**
   Click a slot, or let go of the chip over it. `Esc` puts it back.

4. **Check the figures**
   The green or red numbers on the KPI tiles show what your move did.

5. **Changed your mind?**
   Press `Ctrl` + `Z` or the undo arrow at the top.

The right-click menu

CHOICE	WHAT IT DOES
Move	Pick up the trip, as when dragging.
Move to new row	Give the trip a bus of its own.
Swap	Swap the chosen trips with what another bus runs at that time. Click the other bus next.
Swap from here	Swap everything from this trip on with another bus's day from then on.
Unassign	Take the trip off its bus. It becomes an open issue until it is placed again.
View in timeplan	Open the trip's line in the Timeplan.
Line colour	Choose the line's colour: every chip of the line changes at once.

LOCK AND PIN

Hover over a row's ID. The **lock** keeps a bus exactly as it is: OPTIMIZE leaves it alone. The **pin** (or `P`) puts the row at the top of the list, handy while you work on it.

CHAPTER 5 · STEP 3

Drivers: what is one driver's working day?

A bus can be on the road for 18 hours, but a driver may work about 8 to 9. So each block is cut into duties. On this tab, each row is one duty: a working day without a name yet.

Cutting a bus's day into duties

Cuts are made on the **Vehicles** tab, because duties are cut from the buses' days.

1. **Open the Vehicles tab**
   Find a long bus day.

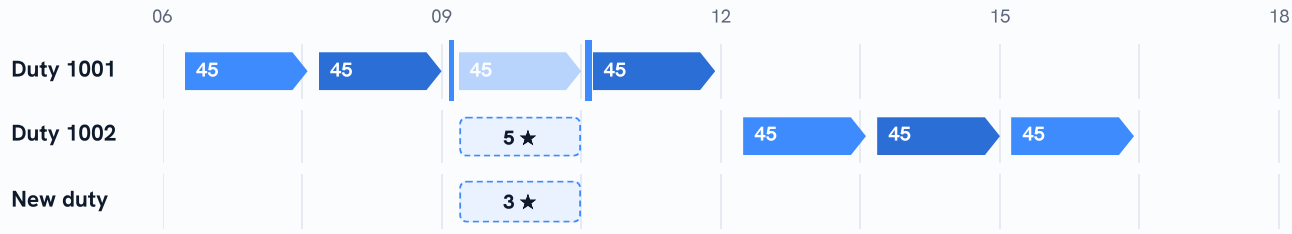

2. **Cut at a terminus**
   Hold the mouse over the gap between two trips. Where a blue line shows, a driver can take over (a terminus or the depot). Click to cut there.

3. **Look at it in Drivers**
   There is one duty more now: the second driver's day starts where you cut.

4. **Undo a cut**
   Back in Vehicles, click the arrows where the drivers change. The two duties become one again.

Give a trip to another driver

On the Drivers tab you move trips between duties just as you move them between buses on the Vehicles tab. The bus keeps running its day; only the driver of the trip changes.

The pale trip of duty 1001 is picked up. Duty 1002 and New duty show a slot at the same time, with stars. Dropped on 1002, its driver drives the trip on the same bus, and duty 1001 is cut before and after it (the blue lines): it becomes a split duty.

1. **Pick up a trip**
   Drag a chip, or double-click it. Slots appear on every duty it could go to, and on **New duty** at the bottom.

2 **More trips at once**

Shift and a click choose every trip of the duty between the first and this one; Ctrl and a click add one trip or take it out. Then drag one of the chosen trips: they all come along.

3 **Read the stars and the cost**

Hold the mouse over a slot. Five stars is the cheapest choice; a **blue** slot breaks no rule, a **red** one does (a meal break missing, a duty type that does not fit). The card shows the cost difference.

4 **Drop it**

Click a slot, or let go over it: the trip is that duty's work now, and its old duty is cut around it. On **New duty** the trips make a duty of their own. Esc puts it back, Ctrl+Z undoes it.

5 **The whole piece of work**

Hold Alt while you drag, or right-click and choose **Move piece**: everything the driver does on that bus comes along, as one piece.

WHERE DRIVERS CAN CHANGE

Only at a terminus or the depot: a trip from the middle of a duty moves only if the bus stands at one before and after it. The new driver must be there in time, at the same stop or with time to travel to it.

Opening a duty

Click a duty's ID on the left. Its panel shows sign-on, the pieces of work, the breaks and sign-off; a long unpaid break makes it a **split duty**. The lock at the top of the panel keeps the duty as it is: OPTIMIZE and your other edits leave it alone.

THE RULES ROSTERFLOW CHECKS

Refused (hard rules): pieces that overlap, too little rest between pieces, a working day longer than the maximum, a driver change away from a terminus or the depot, a driver who cannot get to the trip in time.

Warned (soft rules): overtime, a driver changing at a different stop than where they stopped, a very long break in a split duty.

You set the limits yourself under Preferences (chapter 7).

WHAT MAKES A GOOD DUTY

Close to a full working day (about 8 hours of paid time), breaks at a terminus, as little time waiting as possible. Fewer, fuller duties mean fewer drivers and lower wages.

CHAPTER 6 · STEP 4

Roster: who drives what, on which day?

Now the duties get names. The Roster tab shows the coming seven days. For each day you see the lines and tours, the duties on them, and who drives each one.

1. **Pick a day**
   The day tabs at the top show the next seven days. A dot shows whether every duty is covered.

2. **Give a duty a driver**
   Click a duty, then a driver in the panel on the right (or drag the driver onto the duty). The list puts the drivers who fit first, standby drivers ahead of the rest.

3. **Read why a driver can't**
   Every driver who can't take the duty shows the reason: ill or on holiday, already worked 5 days this week, no licence or type training, driving another tour then, not enough rest after yesterday, or a working day over the limit.

4. **Use the tools**
   Repeat Mon–Fri or **Repeat on the weekend** copies this day's roster to the other days of its kind. **Fill the roster** gives open duties to drivers who fit. **Clear the day** empties the day so you can start again.

WHEN SOMETHING GOES WRONG TODAY

Drivers fall ill and buses break down. On the day itself, RosterFlow's issues show what fell out. A duty can be covered by a free colleague, a standby driver, an agency driver or yourself. A broken bus can be replaced by a spare bus of the line, or a rental bus. Whatever is left can be dropped, with the contract penalty shown.

Reading the colours

YOU SEE	IT MEANS
A duty in a driver's colour	Covered: that driver drives it.
Orange outline	Open: nobody drives it yet.
Red outline	A rule is in the way, such as a clash with other work or a driver on holiday. Hover for the reason.
"No bus"	The tour has no bus today, for example because it is in the workshop.

CHAPTER 7

OPTIMIZE, issues and preferences

OPTIMIZE: let RosterFlow make a proposal

1. **Open Vehicles or Drivers**
   OPTIMIZE is on the toolbar of both.

2. **Click OPTIMIZE**
   RosterFlow works out the blocks and duties by itself. Locked rows stay as they are.

3. **Compare the figures**
   The KPI tiles now show the proposal against your planning: green where it is better, red where it is worse.

4. **Accept it or keep yours**
   Accept puts the proposal in your draft; **Keep mine** forgets it. Then adjust by hand.

> **A GOOD HABIT**
> Lock what you like, then OPTIMIZE the rest. Repeat until the figures stop getting better.

Issues: the to-do list of your planning

1. **Open the issues**
   Click **Global**, **Duty Issues** or **Vehicle Issues** in the status bar. Global issues are about the whole day, such as tours nobody is planned for or a bus in the workshop.

2. **Jump to an issue**
   Click an issue in the list: RosterFlow shows its row. Rows with an issue also have a red ! before their ID.

3. **Fix it, or dismiss it**
   Move a trip, cut or join a duty, or change the rules under Preferences. If it is fine as it is, tick it and dismiss it.

Preferences: the rules of your company

The Preferences window has four groups: **VEHICLES**, **DRIVERS**, **DEPOTS** and **MISC**. Use the search box to find one. Each preference is either:

Hard rule

Never broken. OPTIMIZE always keeps to it, and a hand edit that breaks it is shown as an error.

Soft rule

May be broken, at a penalty. OPTIMIZE weighs the penalty against the savings.

Finish with **SAVE & CLOSE**. OPTIMIZE and the issue checks follow your preferences from then on.

CHAPTER 8

SAVE, DISCARD and what the game does with it

RosterFlow never changes your running company by accident. Everything you do is a draft until you save it.

1. **Make a change**
   Move a trip or cut a duty. The dot at the top turns **orange**: there are unsaved changes.

2. **DISCARD it**
   DISCARD forgets your changes and goes back to what was saved.

3. **Or SAVE it**
   SAVE makes it the company's planning. The dot turns **green**.

WHAT HAPPENS AFTER SAVE

- The day plan and the roster use your blocks and duties.
- The AI buses on the fleet map drive your blocks.
- "Close the day" pays wages and counts kilometres by your duties.
- When you drive a company duty yourself, the company launcher starts exactly the duty you planned: line, trips, bus and depot are fixed.

Printing

Print (on the toolbar) saves the **bus graph** or the **duty graph** as a PDF: the paper the real depots hang on the wall. Printing works on a computer, not on a phone.

CHAPTER 9

Your first full planning in 15 minutes

One line, from nothing to a running day. Follow along in the game.

1. **Timeplan: make the timetable**
   Open Timeplan, pick your line and Mon–Fri, OUTBOUND. Add trips by headway: first 06:00, last 22:00, every 15 minutes. Do the same for INBOUND. Save.

2. **Refresh**
   Click UNSYNCED · Refresh in the status bar. RosterFlow makes the blocks and duties.

3. **Vehicles: look at the buses**
   Note the PVR tile: that is how many buses you need. Do you own that many? If not, buy them first, or take fewer trips in the rush hour.

4. **OPTIMIZE**
   Click OPTIMIZE, compare the figures and click Accept.

5. **Drivers: check the duties**
   Open a few duties. Are they around 8 hours, with a break? Fix the issues in the status bar.

6. **SAVE**
   Press SAVE. The dot turns green.

7. **Roster: name the drivers**
   Open Roster, pick tomorrow and click Fill the roster. Give open duties a driver by hand, or hire more drivers. Repeat on the weekend if needed.

8. **Run the day**
   Let the time run. Watch the fleet map, or drive a duty yourself from the duty panel ("Drive this duty").

IF IT GETS TOO MUCH

You can always switch RosterFlow off in the company settings. The standard planning takes over, and your RosterFlow plan stays saved for later.

CHAPTER 10

Shortcuts, glossary and problem solving

Shortcuts

Ctrl + Z	Undo
Ctrl + Y	Redo
G	Go to a row
P	Pin the chosen row to the top
← → ↑ ↓	Move along a row and between rows (Shift widens the choice)
Delete	Unassign the chosen trips
Esc	Let go of what you hold
Ctrl +wheel	Zoom
Shift +wheel	Scroll sideways
Double-click	Pick up or drop a trip
Shift +click	Choose the trips of a row from the first chosen to this one
Ctrl +click	Add a trip to the choice, or take it out
Alt +drag	Drivers: take the whole piece of work on that bus

Glossary

Block	One bus's day of trips
Deadhead	A drive without passengers
Duty	One driver's working day
Headway	Minutes between two buses
Layover	Waiting time at the terminus
Pull-out / pull-in	Leaving / returning to the depot
PVR	Peak vehicle requirement: buses on the road at the busiest moment
Relief	A driver change
Sign-on / sign-off	Start / end of a duty
Split duty	A duty with a long unpaid break
Time band	Part of the day with its own running times

Problem solving

PROBLEM	WHAT TO DO
My changes don't show in the game	You haven't saved. The dot is orange: press SAVE.
"UNSYNCED" in the status bar	The timetable changed. Click Refresh to make the blocks and duties again.
No slot appears when I drag	Every place would break a hard rule (overlap, too long, too little rest), or the drivers could not change at a terminus or the depot there. Take fewer trips, or change the limit under Preferences.
A driver says "Free" but can't take the duty	Hover over the driver: the reason is shown (rest after yesterday, 5 days worked, no type training...).
OPTIMIZE changed something I wanted to keep	Undo with Ctrl+Z, lock that row, and run OPTIMIZE again.
Too many buses needed (high PVR)	Fewer trips in the rush hour, shorter layovers, or let OPTIMIZE re-chain the blocks.
Wages are too high	Look at paid hours: make fuller duties, fewer split duties and less waiting time.
I'm lost	Click ? for the guided tour, or switch RosterFlow off: the standard planning takes over.

RosterFlow is part of the Omsi-Hub launcher for openOMSI. It is inspired by professional scheduling software and simplified for play. Names and screens may change between Betas.
